Program Overview:

Botox:

This comprehensive one-day hands-on training workshop explores the applications of Botulinum Toxin type A for cosmetic purposes with a focus on the most popular areas requested for treatment. The presentation will include an introduction to the history and new developments on the horizon of Botulinum Toxin A as well as a brief analysis of Botulinum Toxin B. Significant focus on pertinent facial anatomy and physiology will be presented (the cornerstone to safe and effective treatment). The presentation will include mechanism of action, safety and efficacy issues, management and treatment of complications, dilution guidelines, and comprehensive information on proper injection techniques and placement, for the desired outcome. Our intense hands-on session will include identifying and mapping areas for injection and actually doing the injections.

Fillers:

This 1-day intensive hands-on training workshop will present the history, development, and characteristics of dermal fillers (Collagen, Teosyal, Restylane, Juvederm, Radiesse, Prevelle, Sculptra, and Silicone). Comprehensive didactic will be presented of the different injection techniques and safety issues, as well as management and treatment of complications. We will discuss pain management modalities including topical numbing agents. The consultation and assessment process, implement the selection criteria of filling agents and the importance of establishing realistic client expectations will also be covered. In the afternoon intense hands-on sessions will be presented. We will explore the creative and artistic aspects important for a successful treatment outcome which will include special techniques to create the look at your clients' desire and ways to treat difficult problem areas. Our ratio of instructor to the student for this class is 4-6 students to 1 instructor. During the course, you will gain valuable insight and pearls on the "How To" of this unique business model for optimal success. We will discuss price structuring, market trends, and retention of your client base.

Attendees will receive a textbook, product for practicum, nurse shirt and. A certificate showing certification of hands-on training will be provided upon completion of the course.
